

Infotecs Presents Next Generation Security Solutions at it-sa

Berlin, September 4, 2017 – Infotecs, the international cyber security and threat intelligence provider, is again exhibitor at it-sa – the IT Security Expo and Congress that takes place from October 10 to October 12, 2017 in Nuremberg. The Infotecs team will be presenting the newest solutions of their ViPNet Security and Threat Intelligence Platform at the stand 210, hall 9.

The recent hacker attacks with the ransomware WannaCry and the encryption Trojan NotPetya show that even a modern IT infrastructure can be vulnerable. it-sa, the European IT security expo, unites the IT security industry to present the newest products, solutions and services in the field of IT security. With over 580 exhibitors from 23 countries, the most popular and the largest European IT security fair keeps growing. For the first time, it will take place in two halls, 9 and 10. it-sa covers the entire area of IT security solutions: from mobile and cloud security through antivirus protection, encryption, biometry and network security to IT compliance, IT baseline protection and physical IT security.

Infotecs will be presenting its newest solutions of ViPNet Security and Threat Intelligence Platform at the stand 210, hall 9. The Security Suite includes Software Defined VPN solutions, Industrial Control Systems (ICS) protection, SCADA Security, Mobile Security for iOS and Android, Cloud Security, Secure Unified Communications, Secure Collaboration, Intrusion Detection Software (IDS), Industry 4.0 VPN gateways (Modbus/CAN-Bus/PC-Bus), and Security for the Internet of Things (IoT). The ViPNet Security and Threat Intelligence Platform combines complete security for all business areas in one cost-efficient solution and is the only technology that supports true point-to-point security. This way, this infrastructure protection technology can be used against cyber-attacks for various clients' requirements and in various branch segments, e.g. oil, gas and water supply, power supply, municipal services, manufacturing, health care and financial systems, law, telecommunication and public administration.

All Infotecs' solutions are based on the ViPNet technology that uses the highly secure symmetrical key management, similar to the technology used in military and special services around the world. As no key exchange is required in the network when establishing a connection, the ViPNet technology provides an efficient protection against man-in-the-middle attacks. Infotecs' security solutions combine robust encryption, high performance and easy configuration.

"Our priority is protecting our clients with our security products portfolio against more and more complex and sophisticated cyber-attacks. To make that possible, we are developing our innovative IT security solutions that are also easy to implement and maintain", says Josef Waclaw, CEO of Infotecs GmbH. "it-sa is the most important IT security fair in Europe where we can show our solutions, like for example encryption of a drone with a ground station. Here we'll be presenting our technology to the international experts and our channel partners."

About it-sa – The IT Security Expo and Congress

it-sa is Europe's largest expo for IT security and one of the most important worldwide events. Whether cloud computing, mobile and cyber security, data or network security, the exhibition is a unique platform for IT security officers, developers and providers of products and services for IT security. it-sa opens its doors in Nuremberg from 10-12 October 2017. Additional know-how is offered by the Congress@it-sa congress program already starting the day before. Here, in numerous lectures and presentations from 9 to 12 October, experts will be providing information on current issues, strategies and technical solutions for more IT security. For additional information, please visit: www.it-sa.de/en.

About Infotecs

A leading international security solutions provider and pioneer of software-based VPN solutions since 1991, Infotecs developed its Peer-to-Peer ViPNet technology to deliver greater security, flexibility, and throughput than other solutions on the market. The Infotecs ViPNet Security and Threat Intelligence Platform provides complete multi-layer security in one cost-effective solution. ViPNet is the only solution that supports true endpoint-to-endpoint security and delivers robust security which is scalable, flexible, easy to deploy, manage and maintain. The ViPNet solutions seamlessly integrate into existing networks enabling customers to achieve the right balance of high security with low complexity and low risk. More than 1,000,000 clients, offices, and servers have been securely connected with ViPNet solutions, backed up by an unparalleled world-class support, development, and technical team as well as a strong network of partners.
